DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1 – 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Singh et al. (US 6,448,097).

The reference discloses the broad teaching of applying a solution or gas onto the photoresist pattern; analyze the photoresist pattern after applying the solution or gas using a fluorescence spectroscopy; and if the characteristic or CD measured are not satisfactory, adjusting a parameter, one of parameters is the concentration of the solution or gas based on the analysis of the photoresist pattern. See column 5, lines 6-49 and Figs. 6 and 11. Column 6, lines 13 – 32 states that the fluorescence

spectroscopy may use any known technique to measure the characteristic or CD.

Given the teaching of this reference one of ordinary skill in the art at the time the invention was made would apply the teaching to a suitable process and would know the type of concentrated solution and solvent that would be appropriate to the process being applied to the substrate. The development is one of the processes discussed in column 5, lines 6 - 49. Also, given the teaching in the reference to change the concentration of the solution in-situ, one of ordinary skill in the art have recognized that one method of changing the concentration on demand would be by having the meaning mix the components, the concentrated solution and the solvent or diluent. The applicant cited references wherein the concentrated solution was mixed with a solvent/diluent in-situ.
